Profile Summary:

A tenacious Graduate in digital technologies with a First-class (Hons) Degree (predicted) in Business Information Systems. Leads with clear metrics, intent and focus to consistently deliver desired outcomes.

Excellent communication skills and adept at thriving under pressure, ensuring that others are also inspired to perform at their best. Uses creative/innovative approach and effective judgement to identify, define and resolve complex problems.

Talented at leading teams to success, by building strong relationships at all levels, sustaining momentum during times of change, sharing knowledge, and celebrating achievements.

Aspiration is to join a dynamic and innovative organisation to make a significant contribution and have a meaningful impact on commercial outcomes, customers, colleagues and society.

Key strengths include:
- Aligning priorities and resources whilst removing barriers to success.
- Creating compelling cases for change to drive results.
- Shaping and implementing plans to deliver tangible results.
- Leveraging data and analytics to influence key decisions/stakeholders.
- Building strong, effective relationships to ensure alignment, build consensus and create shared value.
- Consistently meets tight deadlines. Openly faces increasing difficult situations with confidence and a 'can do attitude'.

Key Skills:

- Digital Capability
- Commercial Acumen
- Data, Predicted Analytics and Insights
- Agile Methodology

- Collaboration and Teamwork
- Building Strong, Effective Relationships
- Innovative Problem Solving
- Excellent Communication & Influencing Skills

Career Highlights:

- As a group leader for an Agile Project Management module, I was responsible for ensuring that the prototype we created met our client's needs. I effectively managed and led the group towards achieving a first-class grade for the module. Using my negotiation skills, I resolved conflicts and ensured everyone worked towards a common goal. By designing and implementing an effective project management plan, I re-engineered many of the processes to increase efficiency. Through collaboration, we co-created a successful project that met all requirements, delivered it on time and within budget. Our work developed skills in project management, teamwork, communication and customer centricity.

- As a learner in frontend development, I have identified my interest in this field and aligned it with my final year project on creating a web application that educates users on social engineering attacks. This project requires proficiency in HTML, CSS, JavaScript and SQL, which I have acquired through participation in various programs like Black Girls in Tech and Code Girl First. These programs have helped me gain further knowledge and equipped me with a strong foundation in the required programming languages. To further develop my skills, my tenacity and determination led me to register on GitHub to participate in projects and expand my horizon. Through this experience, I have demonstrated my commitment to continuously developing my technical and leadership capability to enable me to build a successful career in front-end development.
